Order from OTS or SLA \$1.10 62-15314

Trans. of Klinicheskaya Meditsina (USSR) 1955, v. 33,
no. 1, p. 88-89.

DESCRIPTORS: *Pancreas, Pathology, *Therapy,
*Procaine, Nerves, Injection.

Observations on 7 patients indicate that the employment
of bilateral paranephric blockade in cases of acute
pancreatitis in the stage of acute edema is feasible and
seems to be a logical maneuver aiding the subsidence
of the acute inflammatory process.

The prevention of myocardial infarction has to be
undertaken on the basis of an understanding of the
etiology and pathogenesis of this process. In so far
as coronary insufficiency may be due to the large role
played by disturbances of the highest levels of nervous
activity, preventive measures must be directed to
restoring the highest nervous activity into normal
channels. Atherosclerosis of the coronary vessels in

DESCRIPTORS: *Intestine, Pathology, *Diagnosis, Etiology, *Therapy, Penicillin, Procaine, Surgery.

Ileitis does not possess a characteristic symptom-complex; the pre-operative diagnosis is fraught with difficulties. In actual practice ileitis is encountered more frequently than is described or diagnosed. The tactics of the surgeon and the character of his operative interference depends on the clinical picture of the illness, the operative findings and the patient's general state.

Peptic ulcer disease in the young tends not to yield to conservative management and there is a great frequency of complications. The indications for surgery in the youthful peptic ulcer patients should be the standard ones, not narrowing them because of youth. The end results of gastric resections performed on youthful peptic ulcer patients are good. (Author)
